

May 2018 Newsletter

Summer Watering Rules Begin May 1st

Summer watering rules are in effect from May 1st until October 1st. Summer watering rules are:

- Water during cooler times of the day — lawn watering is not allowed between 10 a.m. and 6 p.m.
- Water no more than three days per week.
- Do not allow water to pool in gutters, streets, and alleys.
- Do not waste water by letting it spray on concrete or asphalt.
- Repair leaking sprinkler systems within 10 days.
- Do not irrigate while it is raining or during high winds.
- Use a hose nozzle with a shut-off valve when washing your car.

Annual Water Quality Report Now Available

One of our most important jobs is providing safe, high quality drinking water to our customers. District staff and our partners at Denver Water regularly test the water in our system to ensure that it meets or exceeds all state and federal regulations. Each year Denver Water produces a Consumer Confidence Report which details the results of their ongoing water quality testing program. The results are available on the Denver Water website here:

<https://www.denverwater.org/your-water/water-quality/water-quality-reports>

You can also contact the District office and we would be happy to email or mail a copy to you.

Get Your Automatic Sprinkler System Ready For The Season

When you turn your system on for the season, make sure you cycle through each zone to check for leaks. Most systems are set to during night or early morning hours. Cycling through the zones at startup helps identify underground leaks and missing or damaged heads that you may not otherwise see.

Make sure to check your system control valves in the sprinkler box. A leaking control valve can allow water to run into your system even when a zone is not active. Also, don't forget to check your controller's settings if it loses power. Some controllers will revert to factory settings if they lose power.

Are You Planning Concrete Or Landscaping Work?

Is new landscaping on your calendar this year? Be sure to call 8-1-1 to have your underground utilities located before you start. Knowing where the underground facilities are located can help keep you safe and prevent costly, unintended repairs.

Your water meter is typically located outside of your home or business and within 3-5 feet of the property line. If you are doing landscaping or concrete work, be sure to locate the meter pit lid and protect it while the work is going on.

If your meter pit lid is in the driveway, please call the District office for an inspection before you pour new concrete. District staff will help ensure the meter pit lid is at the correct height to allow access and prevent damage to your new flatwork.

Automatic Payment Plan Sign Up Form

AUTHORIZATION FOR DIRECT PAYMENT / AUTOMATIC BILL PAYMENT
Bancroft-Clover Water and Sanitation District

I (we) authorize the Company (Bancroft-Clover Water and Sanitation District) to initiate variable entries to my (our) account described below.
